

Geo-Buddy

An app designed for geology and crystal collectors.
Track and build a digital tour guide to your crystal/fossil collection.

How It Works

The app would have an existing database of gems, minerals, and fossils that users can pull from to create their own unique collection entries; complete with picture references of the specimens for easy comparison, a detailed description of scientific and metaphysical properties, and the ability to add your own photos + notes on the individual specimens like how they are finished, their quality, and their current location in your home/collection. If a comparable match is not in the database, or they prefer to start from scratch, users can also create unique entries entirely from scratch even create an entry with as much or as little information included as they would like. Quick search and several organizational options enable easy navigation, and additional features include a wishlist feature, and a pinnable map feature for active rock-hounders.

FAQ

Can I buy/sell on this app?

No, this is not a commerce app, however you can use it as a means to track inventory if you sell/trade crystals.

Is there a community on this app to discuss geology/how/where to get certain materials?

Sort of. There is a news section with geological news, where you can comment and communicate with other users, and you can also submit research and resources along with your custom entries for the chance for them to be added to the global database.

Can I upload my own pictures?

Yes! Users are welcome to upload photos of their personal collection and add them to corresponding entries along with edit any details of the entries they please.

Can I create multiple entries for the same type of material?

Yes. How you differentiate them is up to the user, however you can easily add duplicates of the same material to your collection and alter the listings as you please.

Is there a way to indicate where I put the crystal?

Yes! In the notes section there is a tag line dedicated to noting where in the collection the specimen has been placed.

Key Features

- Established database to reference, learn from, and pull entries from to use as a basis for collection entries.
- Fully customizable collections, bookmarks, wishlist, and collection entries with ability to add images and location pins
- Detailed and refine-able search options for both users collections and existing database
- Map for tracking origins of collection specimens and for rock-hounding
- Flexible information ranging from science and history to metaphysical available on each specimen entry

Testimonials

“Perfect tool for keeping track of where and what I got!”

“No more double purchases, I never have to worry about accidentally getting the same thing twice.”

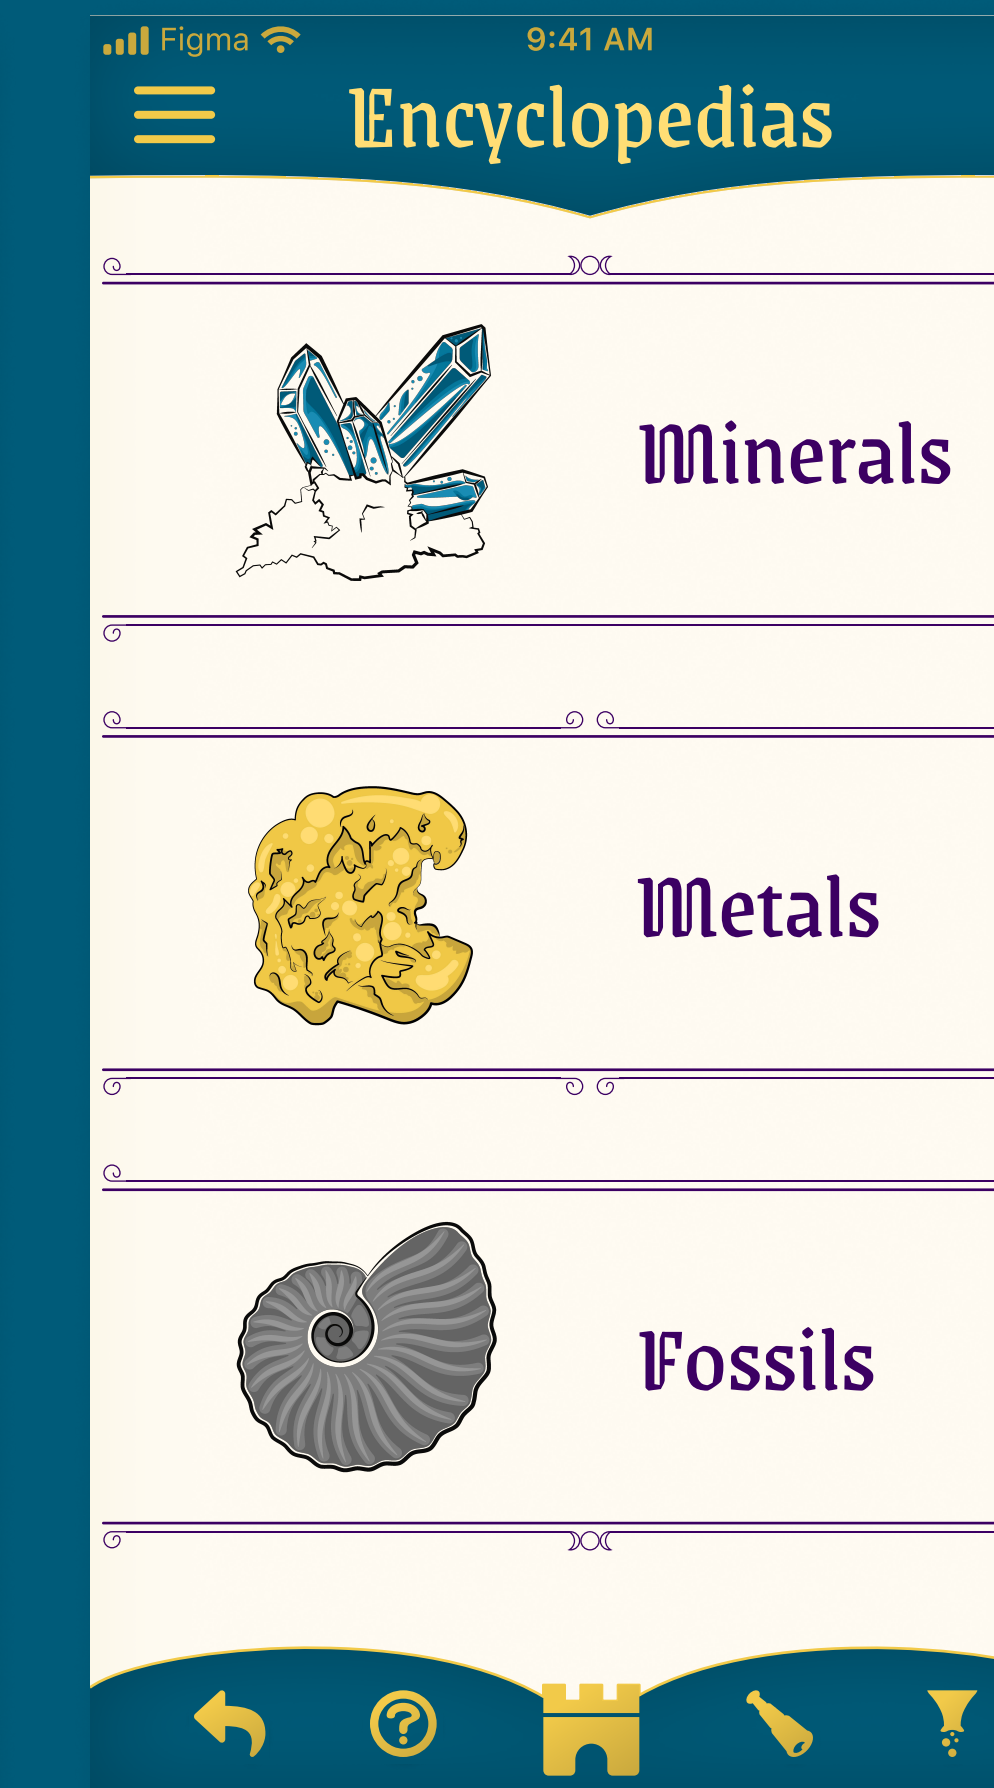

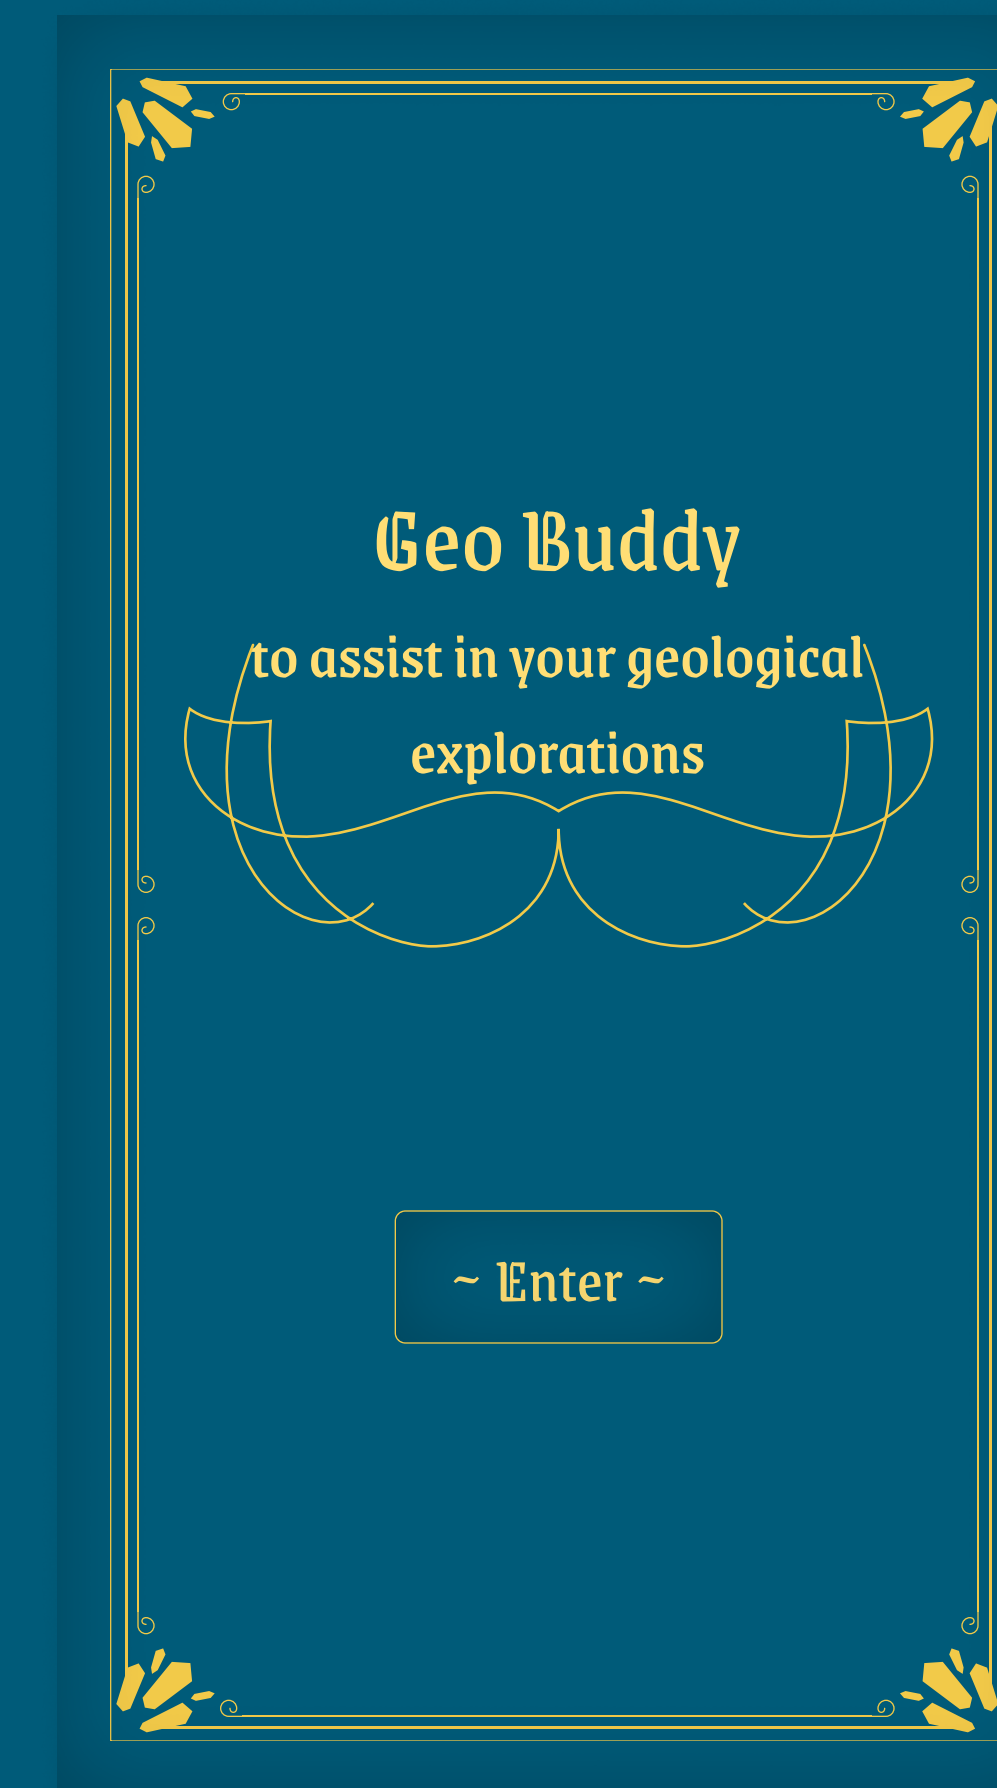

“Wonderful way to keep track of all the things I learn from my suppliers that I would otherwise forget, plus super easy to use!”

Availability & Pricing

Free to download in both the App Store and Google Play Store.
